

Cathodic Protection Measurement

Corrocean CTC-2 Stab CP Reader

The CTC-2 system is based on the cell-to-cell (CTC) technique for CP measurements. It incorporates the stab reader and an additional Ag/AgCl half cell for monitoring field gradients on pipelines.

The system is used for obtaining CP profiles, CP spot-readings and calculated current densities on ROV pipeline & platform surveys.

A robust Stab Reader with high purity Ag/AgCl half cell
